■ Hanging Baskets _____	26
■ Outdoor containers _____	29
■ Supports and Trellis _____	36
■ Production supplies _____	41
■ Transport and cultivation trays _____	46
■ Labeling and special productions _____	48

■ Who we are

We are a second-generation family business, although the current company was actually established in 1990. We are dedicated to the manufacture in plastic of industrial components and articles for horticulture and nurseries. In this catalog you will find a wide range of accessories for cut flowers, pots, containers, support stakes, trellises and trays.

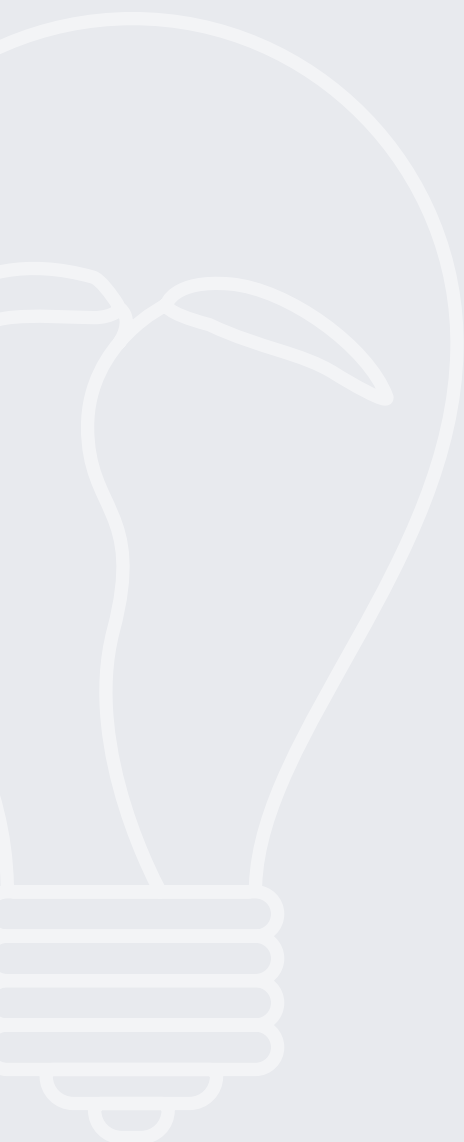

We regularly keep a stock in standard formats and colors, which allows us to meet your orders at the moment. However, our state-of-the-art machines are producing 24 hours a day, 7 days a week; thus, special or labeled items and colors are also delivered within short lead times.

Since 2001, we have had ISO 9001:2000 certification, which accredits our management system in accordance with this international standard. For our customers, this means QUALITY, and we do not only refer to defect-free items, but to all aspects of the supplier-customer relationship: from the request for a quotation, the shipment of an order or the resolution of a possible complaint, we will always give you an answer.

Our RAW MATERIAL, used in the manufacture of our products, is mostly recycled material, except in those where, due to technical specifications, it is not possible.

In addition, it is free of heavy metals such as lead, chromium, cadmium and aromatic amines, thus obtaining products that are totally harmless and 100% recyclable.

Following a major investment in solar panels, 30% of the energy consumed in our production process is photovoltaic, thus reducing CO² emissions.

■ Alber, not just Horticulture

Moldeados Plásticos Alber develops and produces industrial articles and technical components in a wide variety of shapes, sizes and materials.

Our technical team, specialized in the design and manufacture of plastic injection molded parts, carries out the planning, development, execution and quality control of each project:

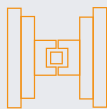

DESIGN IN 3D

CHOICE OF THE RIGHT MATERIAL

CREATION OF PROTOTYPES

DEVELOPMENT OF MOULDS

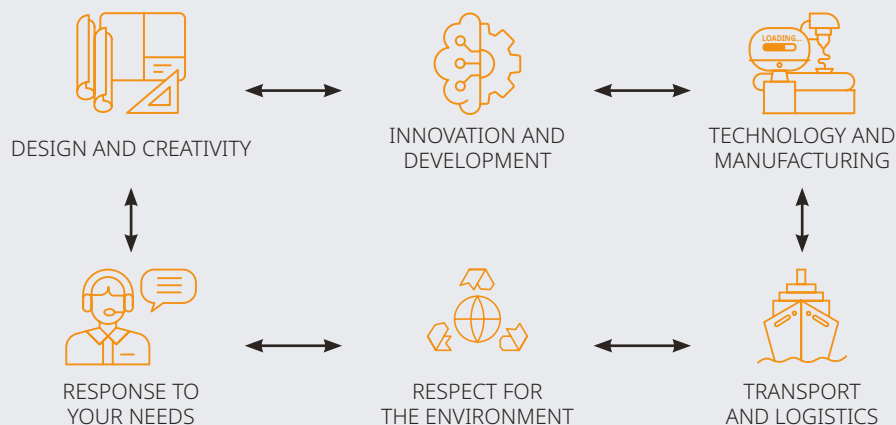

INJECTION OF PARTS

QUALITY CONTROL

We work for customers in different sectors, pharmaceutical, renewable energies, construction, furniture, etc., but all of them have a common denominator, they find in us a capable, competitive and reliable supplier.

Special Berries

CFX Series Containers

Contenedores Serie CFX | Conteneurs Serie CFX

Our CFX Series containers, made of polyethylene, are very resistant to extreme temperatures, frost and UV rays. They are prepared for long-term outdoor cultivation.

This container has two drainage options: the standard one and, on request, the water collection option. The legs are raised by 3.5 cm. Thanks to its elevation from the ground, it prevents waterlogging at the base of the plant.

Its design achieves:

- Maximum aeration
- Substrate isolated from the soil
- Rapid evacuation of excess water
- Water recovery

6 AREAS WITH RAISED GRATING

6 EXTERIOR SIDE OPENINGS

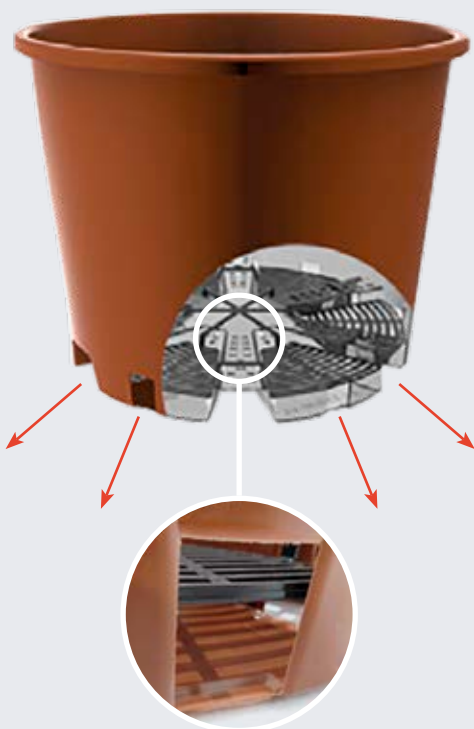

Bottom sloping towards the side openings to ensure optimal water evacuation.

CVX + DrainGrill

3 drains in 1 (Grid + raised bottom + side drain)

The roots of berries are very sensitive to excess moisture and need optimal aeration to develop properly, hence their cultivation in containers requires excellent drainage.

For this, in addition to a container with a great drainage, especially for this type of crop, we have developed a complement for it: the "Drain Grille", thus achieving the combination of three drainage systems: the grid bottom, the raised bottom at various levels and the side drains, thus adding the advantages of the three systems:

- Maximum aeration
- Substrate isolated from the soil
- Rapid evacuation of excess water

The CVX has a large support surface, giving it great stability, which is very important for long term cultivation on soft, sandy soil.

Supports with V-shaped A great victory

Plant supports have been on the market for more than 20 years. During this time, their evolution has been limited to changing the sizes and adapting them to one or another crop. Thus, there are tall and narrow ones for geraniums and other lower and wider ones for poinsettias.

However, the original design remained the same until we created the V-design support. This shape of the vertical ribs allows for perfect stacking and unstacking, better adaptation to the edge of the pot and increases the bending strength by 100%. Therefore, with our V-design you have more robust, faster to assemble and very economical supports at your disposal.

Labeling and silkscreen printing

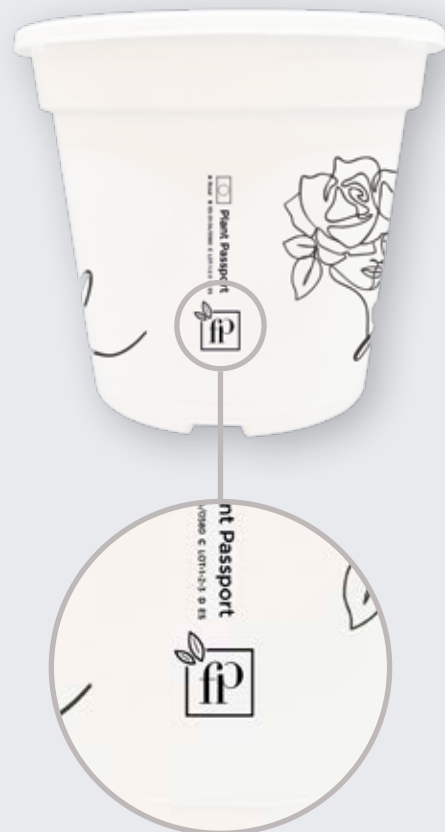

Etiquetado y serigrafía | Étiquetage et sérigraphie

Moldeados Plásticos Alber offers you the possibility to customize your pots and containers economically by means of adhesive labels or silk-screen printing, making them more attractive and adding value to your sales.

We work with custom designs with logos, barcodes, plant care tips (Plant Passport).

Screen printing and labels are highly durable and resistant to scratches, sun and humidity.

Creation of exclusive items

Do you have an idea for a new article?

Do you need a size or format that does not exist in the market?

You can count on us. Our technicians will help you from the development of an idea, the design of a new article or the modification of a standard one, up to mass production.

All with a closed budget and adjusted to the quantities and delivery time previously agreed upon.
